EDUCATION

Florida State University

Aug. 2022 – May 2024

M.S. Statistics (4.0 GPA)

Honors: Best First Year Student in Computational Statistics (2022-23)

University of Florida

Aug. 2018 – May 2022

B.S. Statistics, B.A. Mathematics, Minor: Computer Science (3.82 GPA)

SKILLS

- **Programming:** R, Python (numpy, pandas, matplotlib, scikit-learn, tkinter), C/C++, MATLAB, SAS
- **Databases and reporting:** Azure Databricks, Microsoft SQL Server, SSRS, SQLite, Tableau, Teradata, IBM Cognos Analytics
- **Microsoft Office suite:** Excel, Word, PowerPoint, etc.
- **Document formatting for code/results:** LaTeX, R Markdown, JupyterLab
- **Operating systems:** Windows, macOS, Linux
- **Version control:** Git and GitHub
- Resourceful and effective-problem solver in ambiguous situations
- Strong written and verbal communicator, active listener, diligent code-commenter

WORK EXPERIENCE

Database Application Developer (Freelance), Gymtek Gymnastic Center

Oct. 2024 – Present

- Developing a simple Tkinter GUI application to modernize custom legacy dBASE program (created ~1990) for a small business
- Transformed old database from a few large files with many placeholder columns to modern relational database structure using SQLite
- Collected feedback from office staff to fix long-standing issues and implement desired features, creating massive time savings
- Customized solution to interface with dBASE files/software, allowing users to run old/new programs in parallel for easier transition

Database Specialist, Florida Department of Transportation

Mar. 2021 – Jun. 2024

Honors: Employee of the Month (May '21, Feb. '22, May '23)

- Wrote queries and designed reports for a database of over 1 million records, using Microsoft SQL Server and SQL Server Reporting Services to refactor existing reports (cutting runtime in half) and build new ones for use by Earthwork specialists throughout Florida
- Assisted in the launch of the Earthwork Records System (ERS, a massive state-wide conversion of all Earthwork data collection from paper forms to the Internet) as sole report-writer and main point of contact for all matters concerning ERS tables/data
- Designed complex SQL queries (typically 1000+ lines with subqueries, window functions, CTEs, etc.) to perform tasks such as back-calculating test results to check for falsified or erroneous data and flag these instances in the report

Data Analyst Intern, CNH Industrial

May 2023 – Aug. 2023

- Developed a custom tool for tracking and measuring demand forecast accuracy (specifically for brand-new parts), starting only with North America before expanding tool to all PLC teams worldwide (EMEA, LATAM, APAC)
- Enabled PLC teams to track their forecasting performance over time and view recommended parts for review based on several key metrics, and empowered management with more precise measurements of forecast quality and methods to identify problem areas
- Designed/packaged Tkinter GUI application (Python) which provides massive time savings for pulling/reviewing data versus working directly in IBM Cognos (instantly view all global new parts data vs. waiting 10+ minutes to pull data manually)

Student Data Analyst, Publix Super Markets

May 2022 – Jul. 2022

- Built in-house replacement for automated narrative reports on inventory shrinkage (lost/stolen/damaged retail product) by reverse-engineering the existing outsourced reports with SQL and generating dynamic text narratives using Python
- Worked with leadership of retail business units (Grocery, Deli, Bakery, etc.) to identify areas for improvement and implement new features for more actionable insights than the previous report, including a weighted scoring system which incorporates a variety of metrics (i.e. ratio of known vs. unknown shrink) to identify the areas with the greatest potential for impact
- Deployed final reporting process to the cloud as a Databricks notebook which is still used by Publix every month, generating PDF reports for all 1300+ stores in fewer than 45 minutes and saving the company over \$90k per year (annual cost of outsourcing reports)

ACADEMIC EXPERIENCE

(FSU) Graduate Instructor (*Probability, OLS, hypothesis testing, confidence intervals*)

Aug. 2023 – May 2024

(FSU) Graduate Teaching Assistant (*Introductory business statistics*)

Aug. 2022 – May 2023

(UF) Undergraduate Research Assistant (*R, spatial data, shell scripting, Linux*)

Aug. 2021 – May 2022
